Completing digital forensic investigations is a difficult task, given the variety of data storage devices that exist today. To securely triage and acquire data from any type of storage device that may ultimately decide a suspect’s innocence or guilt, a forensic investigator must be equipped with the right tools. Tableau by Guidance Software is the tool of choice for thousands of field agents, lab technicians, and investigators for over a decade. The reason is simple – Tableau’s forensic hardware delivers consistent results, giving examiners and investigators the peace-of-mind they need when dealing with any type of digital evidence.

Tableau products are designed with the forensic examiner in mind. Hundreds of man-hours are invested in design and development to ensure that it will deliver in the most challenging of circumstances. In addition to expert support, forums and knowledge bases, we provide free Tableau firmware updates to improve product performance, add new capabilities, and resolve issues quickly. With Tableau, examiners not only gain a set of digital forensic products that have been proven in the field and courtroom, but also a team of experts from Guidance Software.

Our #1 objective is to deliver the products and support investigators need to triage and acquire data from any device, reduce their backlogs, and increase their ability to meet the needs of their department, agency, and community.
